

Rabe Consulting provides assistance by working with landowners through a service- and solution-oriented process to meet project objectives efficiently, to comply with regulations, and to secure project funding. At the same time, we deliver the scientific expertise that balances the intricate needs of our clients and the environment.

Rabe Consulting's restoration specialists are trained in a wide range of natural resource and land use disciplines. Our ecosystem planning and restoration services include:

- Project Development
- Project Coordination and Management
- Grant Writing
- Environmental Permits
- Monitoring

This streambank restoration project was implemented by moving the levee, reinforcing the streambank with vegetation, and providing in-stream fish habitat.

These are views from before, during, immediately after, and 1 year after restoration. Rabe Consulting secured funding for the project through state and federal grant programs.

Types of Projects

- Irrigation efficiency improvement
- Irrigation tail water recovery systems
- Riparian fencing and restoration
- Offsite livestock watering
- Noxious weed abatement
- Upland restoration
- Stream channel restoration
- Fish screening
- Power conservation
